E  
3-13, wherein one or more sugar of the oligonucleotide contain an -OMe group at its 2' position.]

E 2  
--26. (2X Amended) A method of promoting the regression of vascular lesions, comprising introducing into a vascular cell an amount of a composition of matter comprising an antisense oligonucleotide comprising consecutive nucleotides, the nucleotide sequence of which is set forth in one of SEQ ID NOS:1 and 3-13, effective to reduce the levels of bcl-xL protein produced, thereby promoting the regression of vascular lesions, wherein one or more sugar of the oligonucleotide contain an -OMe group at its 2' position.]

E 3  
--36. (Amended) A composition of matter comprising an antisense oligonucleotide comprising consecutive nucleotides, the nucleotide sequence of which is set forth in one of SEQ ID NOS:1 and 3-13, wherein one or more sugar of the oligonucleotide is modified at its 2' position.]

Please add new claims 63, 64 and 65 as follows:
